EXCALIBUR, automated palletization tie-sheet cutter

This innovative solution has been designed to automatically cut out and distribute palletizing interlayers from a single roll - according to defined lengths.

EXCALIBUR sets itself up directly in the palletizing lines and fits in with the configuration and the special features of each site. It allows the cutting of standard and technical papers inserted between the layers of products carrying out their stability in the supply chain

Thus the EXCALIBUR range is able to take into account the storage optimization issues ordered by mass distribution, but also the evolutionary pressures of many industrial markets.

Developed to respond to cost issues, the EXCALIBUR range offers **3 models** -BASIC, CLASSIC, and EXTENDED.

- The EXCALIBUR BASIC model is limited to the cutting of single-sheet interlayers,
- The EXCALIBUR CLASSIC is available in a variety of versions -MONO, DUO and QUATTRO-, with multi-sheet cutting options (half-pallet and quarter-pallet) from a single roll unwound on a trolley.
- The EXCALIBUR EXTENDED model has been designed for manufacturers, who have robotic production lines. It allows a re-supply of the consumable without having to cross the gates of the robotic line and thus ensures a better efficiency of the line.

Finally, in order to meet the integration needs of layer palletizers (high-level, low-level), EXCALIBUR can be tailor-made according to each project, allowing the sheets to be available for the palletizers, regardless of their layout and congestion.

All these models are CE and available in widths of 800 mm and 1200 mm.

NEWS 2017:

The CGP COATING INNOVATION group is present in North America through its subsidiary CGP EXPAL and a full UL-certified range has been launched in North America over the last few weeks. The EXCALIBUR UL models are available in 40" and 48" widths.

All EXCALIBUR models are available for sale or rental.

About CGP Coating Innovation

Established in 2010, CGP Coating Innovation is a consortium of companies which designs, develops and produces a full line of solutions in the fields of Logistics, Packaging and special coatings. With 200 employees, the group, which processes more than 30,000 tons of paper per year, had 2013 sales of 32,214 K € (with 80% from exports). With innovation in its DNA, it has built in recent years a structured R&D component, an international technical center, and a division dedicated to technical support--CGP Expert--, to continue its development in close collaboration with its customers. It is now present on 4 continents -America, Asia, Europe and Oceania- with 12 sales offices and 5 production sites, including 3 in France, 1 in Germany and 1 in North America.
