

## French packaging-machine manufacturer since 1927

- A packaging-machine **designer & manufacturer** specialized in filling and closing dry & liquid products.
- A dedicated **study desk** for the CAD, electricity, automatism, R&D, legal metrology & artificial intelligence.
- A **4.0 fabrication shop** equipped with a 5-axe numerically controlled machining centre.
- A family company founded 90 years ago : more than **10,000 machines** sold all around the world.
- A factory located in Villepinte, just 15 minutes away from Paris CDG airport, train station & RER station.

## Innovation MOM : a filling machine for bags & buckets up to 30kg (type Z78)

- This weight-filling machine for large volumes is designed to fill buckets or bags thanks to its pneumatic grip.
- Thanks to its scale, the Z78 30kg is especially **accurate & polyvalent** : from 500g to 30kg on the same equipment !
- Using a precision-dosing auger, it reaches important speeds, up to **2,500 kg/h**, while keeping its accuracy & cleanliness.
- As the outcome of research in **robustness & simplicity**, the Z78 30kg requires little maintenance & less than 5 minutes for format changes, with no extra tooling.
- Designed to minimize the efforts, the scale plate is made of idle rollers, allowing the user to simply push the filled packaging to the closing station.
- Equipped with a **dust capturing system**, it allows to deal with all kinds of powders, from free-flowing ones to the dustiest ones.
- For a better **traceability**, the machine records every weight filled, with its batch number, tare weight,... This data can be retrieved with any USB key or via Ethernet. No software or license needed !
- The supply in product for the Z78 30kg is automated by a sensor level located in the tank. It could be realised by gravity with a horizontal auger or with a pneumatic transfer system.

The Z78 30kg will be exhibited at **Interpack Hall 6 stand D10-5!**
